***Allowable Subject Matter***

1. Claims 2, 4, 6-7, 9-10, 12-13, 15-17, 20, 22, 24-25, 27-29, 34-38 are allowed.

***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance:

The prior art taken singly or in combination does not teach or suggest, a memory subsystem among other things, comprising:

a first memory controller having a first register having at least M+1 register fields, a first of the register fields storing a value indicative of the number of functional memory sub-arrays of the first memory array, and M register fields each for storing a value indicative of which of the M sub-arrays correspond to the respective blocks of memory; and a second memory controller having a second register having at least N+1 register fields, a first of the register fields storing a value indicative of the number of functional memory sub-arrays of the second memory array, and N register fields each for storing a value indicative of which of the N sub-arrays correspond to the respective blocks of memory.

The closest prior art, Cox (U.S. Patent No. 5,357,621) teaches a memory system having a plurality of memory modules coupled in a daisy chain fashion, each of which includes a memory controller coupled to corresponding blocks of memory. Cox also teaches the memory system includes the capability to bypass or disable bad memory modules and reassign memory addresses without leaving useable memory unallocated. Ottinger (U.S. Patent No. 6,070,231) teaches a memory system comprising a plurality of memory controllers, wherein each memory controller

Art Unit: 2676

is capable of transferring a memory request to another memory controller via a memory controller bus.

However, neither reference Cox nor reference Ottinger teach the memory controller with the above features.
